Project Proposal

I know this isn't due but here is my quick summary proposal.

A website that allows users to browse popular guitars and guitar amplifiers. I will have a home page with 4 thumbnail links to 4 popular electric guitars, their specs, and their history.

Fender Stratocaster, Gibson Les Paul, PRS Custom 24, Fender Telecaster

Each link will lead to the history of the instrument and will feature videos of the instrument in action.

I will also put 4 links to 4 popular guitar amplifiers

Marshall Super Lead, Vox AC30, Orange Rockerverb 50, Fender Deluxe Reverb

Each link will lead to a page with the amp's history and feature videos of it in use.

I will also have a slideshow on the homepage that goes through various photos of guitar and guitar equipment.

I can't really go into more specifics without seeing the actual Assignment Prompt for the Project but this is my quick summary proposal. I will start outlining this website this week.
